# WHAT IS BACKBONE.JS

- Javascript library for rich client side web pages
- Gives You: Models, Views, Collections, Routes, and Events
- Model save and fetch commands can sync with Rails backend
- Only 1400 lines code, easily read and extend. No magic

# WHAT IS IT GOOD FOR

- Provides a path to quickly build complicated web pages, just like Rails did for web apps
- Separates html content from javascript
- Organizes your jquery code.  
No more large script tags at the beginning of the html file.

# WHAT DOES IT LOOK LIKE

To the code...
